Capital One Financial Corporation

*CS5071NI - Professional and Ethical
Issues*

Carron Singh 23050380 (C10)

Introduction

- Capital One is a major American bank founded in 1994.
- Specializes in credit cards, auto loans, and banking services.
- Ranked among the top 10 U.S. banks by assets..
- In 2019, it suffered a major data breach affecting over 100 million people.
- This presentation analyzes the professional, ethical, legal, and social issues involved.

Background of the Breach

- Occurred in July 2019, disclosed by a tip.
- Hacker: Paige Thompson, ex-AWS employee.
- Exploited a misconfigured firewall in Capital One's AWS cloud.
- Accessed personal data: names, addresses, credit scores,
- The breach exposed personal information of over 100 million U.S. and Canadian customers.

Social Impacts

1. Loss of public trust:
People stopped trusting
Capital One .

2. Emotional stress :
Victims felt fear anxiety, and
frustration..

3. Impact on Vulnerable
People: Elderly and low-
income users were hit harder.

4. Cloud Security Concerns:
Raised worries about storing
data on cloud platforms.

5. Third-Party Risks :
Showed danger of relying too
much on outside services.

Ethical Issues

1. Violation of Consent:
Customers' data was accessed
without permission.

2. Failure of Duty of Care:
Capital One neglected its
ethical responsibility to
protect users..

3. Erosion of Trust:
Damaged the ethical bond
between company and
customers.

4. Breach of Confidentiality:
Sensitive data was not kept
secure.

5. Transparency Issues:
Delayed disclosure of breach
impacted ethical
transparency.

Legal Issues

3. inadequate Compliance:
failed to meet legal security standards.

1. Violation of Data Protection
Laws: Breach of Data
Protection

2. Regulatory Penalties:
\$80 Million Fine

4. Lawsuits:
Over 100 lawsuits

5. Enforcement Actions:
investigations by agencies like
the OCC and FTC.

Professional Issues

1. Failure in Duty of Care:
Staff did not properly protect
customer data.

2. Violation of ACM & BCS
Ethics: Broke key professional
codes like integrity and
privacy.

3. Poor Risk Management:
Weak security checks and
monitoring systems.

4. Lack of Professionalism:
Irresponsible behavior in
handling sensitive data.

5. Training and Awareness
Gaps: Employees lacked the
training to spot or stop such
issues.

Conclusion

The Capital One breach showed the dangers of poor cybersecurity. A firewall misconfiguration exposed data of over 100 million users. It highlighted the need for strong data protection, regular audits, and staff training.

Personal Reflection

I've learned about the practical advantages of lacking safety measures from this coursework. I recommend businesses to establish ethical frameworks for decision-making, apply strong control measures, and provide ongoing training to employees. I will give data privacy, ethical responsibility, and compliance top priority in all of my work as a future IT professional.

Thank you
